

Appendix H

Grading Plan

Note:
a) This is a preliminary and DRAFT grading concept which has been created to be used in flood modeling.
b) It needs further refinement to address matters such as servicing, transitions, wetland micro-topography, and many other aspects of the design which will only be resolved during the Detail Design phase.
c) It has been prepared without the benefit of a soils management strategy.
d) It will continue to be adjusted for flood protection goals, requirements for wetland stability, and park and city creation.
