## Heart Lake Bowl Meadow Restoration - Monitoring & Maintenance Project

**Date:** June, July, 2012

**Location:** Heart Lake Conservation Area

**Watershed:** Etobicoke Creek

**Region:** Peel

**Municipality:** Brampton

**Partners:** Region of Peel, TRCA

TRCA staff conducted monitoring and maintenance activities on the previously planted wildflower meadow plots located in the Bowl at Heart Lake CA. Thistle was pulled which had overtaken plots previously established. These 4 areas were bordered with cedar logs and paths created between sections. Two new plots were established for 2013 planting events. Pollinator species have declined in part due to habitat loss and this type of restoration helps assist with their continued existence.

Habitat Type	Total Area Maintained m <sup>2</sup>	# of Staff	Total Staff Time
