## Meadow Plot Maintenance, Heart Lake CA

**Date:** May 14, 2014

**Location:** Heart Lake CA

**Watershed:** Etobicoke Creek

**Region:** Peel

**Municipality:** Brampton

**Partners:** TRCA, Region of Peel, York University

A group of 25 enthusiastic third year Ecological Restoration students from York University came out to Heart Lake and participated in meadow maintenance. In short order, this group had 5 existing plots trimmed of dead growth and raked. This type of maintenance activity is necessary to allow new season growth to flourish and provide habitat for native pollinator species. The group also prepped a new meadow plot for future restoration plantings. These meadow plots are planted with native wildflowers which provide valuable habitat for a variety of birds, bees, butterflies, insects and other local wildlife.

### Positive Environmental Impacts

Number of Plots Maintained	Total Area Enhanced sq.m.	Volunteers	Volunteer Hrs
6	110	25	75
<b>Total</b>	<b>110</b>	<b>25</b>	<b>75</b>
